WHAT CAN I EXPECT AT MY DOG'S DENTAL CLEANING?

BEFORE

You'll go over your dog's medical history with your vet (be sure to bring any medications your dog is taking or relevant documents with you). Your vet will perform a complete physical exam and take a blood sample. You might discuss potential procedures if problems are found during the cleaning.

DURING

For your dog's safety and comfort, anesthesia is required for dental cleanings. Your vet will perform a thorough oral exam followed by a complete dental cleaning. Dental x-rays may be needed to evaluate periodontal disease and see if your dog will need any extractions (surgical removal of unhealthy teeth).

AFTER

Your vet or a member of your vet health team will review the dental procedure with you. You may notice your dog is drooling, subdued, or has a decreased appetite. Your dog may be prescribed antibiotics, pain medication, or an at-home dental health care plan including brushing or a special diet.

REMEMBER: Don't hesitate to call your vet for advice or more information about your dog's dental cleaning.
